

All Great Disasters

Strike without warning. Fire is the most common; Cyclones the most dangerous, generally. Nobody knows when either will come—they don't travel on schedule time or have any regular stopping places. Tazewell may never have either—and yet we may have both tomorrow—nobody can tell. We are in just as much danger of it and should have all property insured against loss from either source.

by making them yield the biggest possible crops. Grain must get the nourishment that makes it grow out of the soil—and the more plant food there is in the soil, the quicker and bigger and more plentifully the grain will grow. But you must first put the food into the soil by liberally using

Virginia-Carolina Fertilizers

Then a big bumper crop is assured, because these fertilizers contain the necessary elements required by the soil to properly and fully mature the grain. Farmers invariably find that the more Virginia-Carolina Fertilizer they use, the bigger is the crop, and the greater their profit.
